

Board Chair

Kim Markwell

Kim is an environmental scientist with a passion for nature, water and people.

Kim has moved from research to consulting 13 years ago and is happiest when she is working with people from other backgrounds and disciplines to create healthy, resilient and valued places.

The types of projects Kim works on range from the development of policy and strategy for green infrastructure and waterways, inclusion of integrated water and landscape designs into large master plans, through to the design of street trees and other landscapes that capture and use urban stormwater.

Kim is also a mother of two young children and enjoys spending my spare time with friends and family camping in nature near water.
